LAST EXPERIENCE

Flight co, USA — sr. Front-End engineer

2017 - PRESENT

Development of a dashboard for accounting aircraft - costs, profits, reports, tables, filtering, charts, planning future trends about financial state aircraft, and more others. FE part was written on React, Redux, Saga, material ui, ant design.

On project i developed:

- **all charts**, also a **very complex chart** for displaying financial state aircraft via different periods.
- **a few calendars**(as Google Calendar) for easy add, edit, show different events about aircraft - flights, maintenance, charter and other events. Special attention was paid to time zones.
- **also developed system transactions** - complex form costs by category and by big number other options. With considering course currencies and auto calculations.
- **developed system flights** - also is a complex form with big number parameters.
- **billing a section** - this section with tables, forms and complex relations between them.

EDUCATION

State University of Artificial Intelligence, Ukraine, Donetsk

2006 - 2010

Studied on a budget form. Took place at the Olympiads.

PET-PROJECTS

Boilerplate on BE and FE — react + node.js + ts

It is a boilerplate for fast development start applications. Boilerplate has auth flow, begined admin part. BE part - it is a REST api server written on TypeScript with TDD. To change database structure applies a migration pattern. And also used typeORM for models. I hope this will be applied in production somewhen.

LEX - online English trainer — react + ts

This project helps in learning new words. It is written using Material UI.

SKILLS

JavaScript, TypeScript, OOP, TDD, React, Redux, Saga, Ember, Node, Restify, SQL, MySQL, PostgreSQL, Git, Bash

ACHIEVEMENTS

Implemented a few libs for work with a tree data structure. Published on github Have stars. And the community is active using these libs.

I WANT TO MAKE

- * Web application for determining the productivity of a programmer (via open api of jira) and general analytics
- * Console application for finding unused files or functions
- * Several programs using neural networks

HOBBIES

English, Time management, Workout

LANGUAGES

English(reading, writing), Russian, Ukrainian
